

LP TRUCK PUSHGATE® PANEL

The panel shown here was designed for use in a LP delivery truck where it monitors the flow and amount of LP gas that is dispensed.

Drivers of these delivery trucks are often wearing gloves while operating the switch – making it vital that each switch have a crisp tactile feel when actuated.

This, in addition to significant reliability and longevity of operation over traditional mechanical switches, led our customer to choose the Duraswitch® PushGate® technology for this project.

LP Truck Pushgate® Panel
