

## WEB TENSION CONTROLLER

The custom control panel featured here was designed to be compact and simple-to-use. The operator panel is part of a system that offers steady tension control over a variety of materials including paper, film, foil, or fabric for any type of continuous web printing application.

A continuous turn encoder was used in order to offer very precise tension control. In addition, a custom molded cable was included with each panel - offering our customer a complete turnkey solution.

The panel also features an alphanumeric display and each control was designed to have only one function in order to simplify operator training and use.

### Project Details

- Two (2) embedded LEDs with deadfront
- Membrane switch with thirteen (13) tactile

*Web Printing Press Operator Panel*

keys (one is hidden), and one (1) rotary switch

- LCD display with clear display window
