

PIEZOPANEL® WITH GLASS OVERLAY

PiezoPanels® are ideal for harsh industrial, medical, food processing and car wash applications. Incorporation of a glass overlay adds exceptional durability, chemical resistance, and the ability for the switch to be backlit. In addition, a glass overlay offers greater decorative flexibility than stainless steel.

Glass Overlay Features & Benefits:

- **Material** - The overlay is constructed of tempered glass, providing excellent durability against abrasions, chemical reactions, and excessive force. The standard finish is high gloss, however matte is available upon request. In addition, all panels are sealed to meet our customers specifications.
- **Decoration** - Since the graphics are applied to the second-surface, virtually any graphic can be used. Windows may also be created by leaving certain areas as undecorated

PiezoPanel with Glass Overlay

clear glass.

- **Dimensions** - A standard thickness of .020" glass is utilized for most applications. However, a .040" thickness is also available. Wilson-Hurd can supply finished PiezoPanels with glass overlays up to 18" x 24".
